

CLAIMS

We claim:

1. A doll comprising:
a base having a top side;
a set of legs being integrally attached to and extending upwardly
from said top side, said set of legs having an upper end being
attached together;
a torso section having bottom end and a top end, a pair of arms
being integrally attached to and extending away from said
torso section;
a neck being integrally attached to and extending upwardly from
said top end;
a first spring attaching said torso section to said set of legs such that
said torso section is movable with respect to said set of legs;
a head having a bottom side; and
a second spring attaching said neck to said head such that said head
is movable with respect to said neck.
2. The doll according to claim 1, wherein each of said first and
second springs are vertically orientated.
3. The doll according to claim 1, wherein said bottom end of
said torso has a well extending upwardly therein, said first spring
attaching said upper end of said set of legs to an interior surface of said
well such that said upper end of said set of legs is positioned within said
well.
4. The doll according to claim 3, wherein said bottom side of
said head has a hole extending upwardly therein, said second spring

attaching said neck to an upper wall of said hole such that said neck extends into said hole.

5. The doll according to claim 1, wherein said bottom side of said head has a hole extending upwardly therein, said second spring attaching said neck to an upper wall of said hole such that said neck extends into said hole.

6. The doll according to claim 2, wherein said bottom side of said head has a hole extending upwardly therein, said second spring attaching said neck to an upper wall of said hole such that said neck extends into said hole.

7. A doll comprising:
a base having a top side;
a set of legs being integrally attached to and extending upwardly from said top side, said set of legs having an upper end being attached together;
a torso section having bottom end and a top end, a pair of arms being integrally attached to and extending away from said torso section, said bottom end having a well extending upwardly therein;
a neck being integrally attached to and extending upwardly from said top end;
a first spring attaching said upper end of said set of legs to an interior surface of said well such that said upper end of said set of legs is positioned within said well and said torso section is movable with respect to said set of legs, said first spring being generally vertically orientated;

a head having a bottom side, said bottom side having a hole
extending upwardly therein; and
a second spring attaching said neck to an upper wall of said hole
such that said neck extends into said hole and said head is
movable with respect to said neck, said second spring being
generally vertically orientated.
